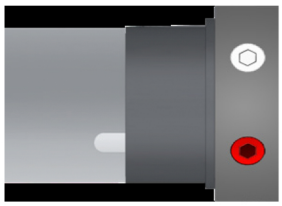
MOTOR LIMITS

NOTE: The location of the motor will affect how you set the limits. You will need to alter the instructions based on the correct prompt for where your motor and cord are placed

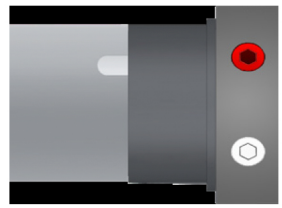
A. *Motor on the* **RIGHT** *Cord out the* **FRONT**



Upper Limit- White Dial
Lower Limit - Red Dial

Clockwise to find limits
Counterclockwise to fine tune limits

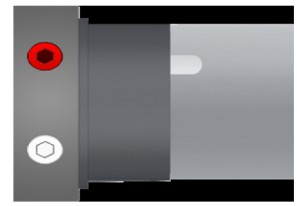
B. *Motor on the* **RIGHT** *Cord out the* **BACK**



Upper Limit- White Dial
Lower Limit - Red Dial

Counterclockwise to find limits
Clockwise to fine tune limits

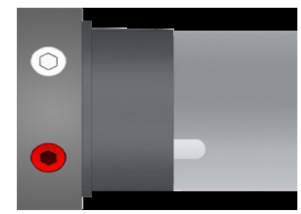
C. *Motor on the* **LEFT** *Cord out the* **FRONT**



Upper Limit- Red Dial
Lower Limit - White Dial

Clockwise to find limits
Counterclockwise to fine tune limits

D. *Motor on the* **LEFT** *Cord out the* **BACK**



Upper Limit- Red Dial
Lower Limit - White Dial

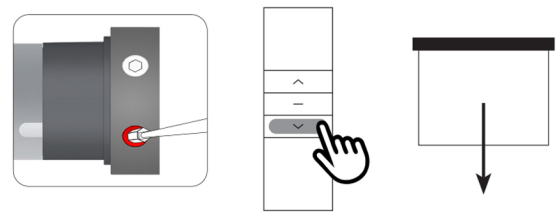
Counterclockwise to find limits
Clockwise to fine tune limits

SETTING LIMITS

ALTERNATE TO THE BLACK TOOL: 4mm Allen wrench – black tool is included in Helios Box.

*** IMPORTANT: Use the below as a guideline, but refer to the motor and cord placement above when setting upper/lower limits ***

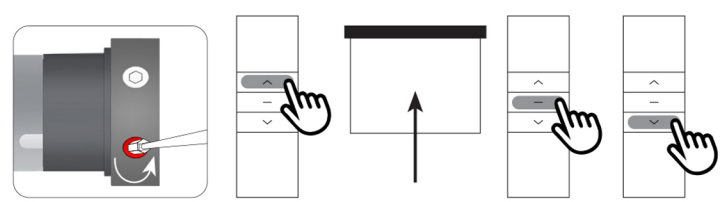
a Lower Settings



i. Insert the Black limit tool supplied into the hole with the arrow point up

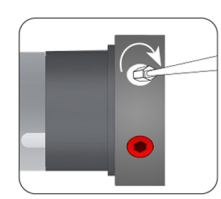
ii. Press the **DOWN** button to roll the shade down, the shade will roll down a few feet and stop. This should happen on its own. If it does not:

Turn the limit **tool in the direction shown in diagrams A, B, C, or D** above a few times. Press the **UP** button to roll the shade up about a foot and press the **STOP** button



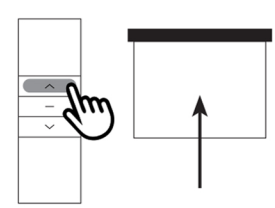
Next, press the **DOWN** button to roll the shade back down and the shade will stop short of where it did before.

b Upper Settings



i. Insert the Black limit tool supplied into the hole with the arrow pointing down

ii. Turn the limit **tool in the direction shown in diagrams A, B, C, or D** above 10 times.
During step iii be ready to stop the shade in case the shade doesn't stop at the desired upper limit. If you have to stop the shade before it reaches the top, roll the shade back down a few feet and start back at previous step.



iii. Press the **UP** button to roll the shade up.
The shade will roll up and stop.

iv. Once the shade stops turn the limit tool **in the direction shown in diagrams A, B, C, or D** below to make the shade inch up to your desired upper limit.
